                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    뭐
                         The fusion protein genes of the invention pref. comprises cDNA sequences which encode CD4 or a fragment which binds gp120 ligated to an expression plasmid which encodes an antibody in which the variable region of the gene gene has been deleted (see Wo87-02671). The CD4 portion of the fusion protein may comprise the complete CD4 sequence, the 370 AA extracellular region and the membrane spanning domain, or the extracellular region. The greatly claimed: from IgM, IgG1 or IgG3. The following are specifically claimed: fusion proteins CD4Hlambda1, CD4Hmu, CD4Pmu, CD4Elambda1, and CD4Mmu (No. 67608), pCD4Plambda (No. 67609) and pCD4Elambda1 (No. 67610). (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fusion protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of fusion protein CD4Bgammal comprising the extracellular portion of CD4, which binds to HIV gp120, linked at its C-terminus to the human IgG1 heavy chain. To obtain the fusion protein, DNA encoding CD4 was linked to IgG1 DNA at the Ban1 site downstream of the hinge region (see AAA50664). Fusion protein CD4Bgammal and a nucleic acid encoding it are claimed. Also claimed are a vector comprising the nucleic acid, and a method of producing the fusion protein in secreted form using a transformed host cell. The fusion protein may further comprise a therapeutic agent, radiolabel or NMR imaging agent. The fusion protein can be administered to an animal (including humans) for treatment of HIV or SIV infection, and can also be used in assays for HIV or SIV, imaging and tissue stains. IgG1 fusion proteins such as CD4Bgammal provide both complement-mediated and cell-mediated immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 616 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CD4-immunoglobulin fusion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                    protein, e.g. the present sequence, linked to a targetting polypeptide chat binds a molecule, which differentiates a host cell from a tissue graft cell, or selectively targets a stimulator cell involved in the cautoimmune response. A veto molecule, in which the protein binds a molecule that targets stimulator cells, can be used to suppress an immune cresponse and therefore treat autoimmune diseases, e.g. systemic lupus crythematosus, myasthenia gravis, rheumatoid arthritis, insulin dependent diabetes mellitus, multiple sclerosis, coeliac disease, autoimmune thyroiditis, Addison's or Grave's diseases and rheumatoid carditis, allergies and other immunological diseases and rheumatoid carditis, allergies and other immunological diseases and rheumatoid carditis, combined that differentiates graft and host cells, the veto molecule can be used to reduce transplant rejection. The veto molecule provides specific regulation of particular stimulator cells that can kill graft cells or respond to autoantigens, but leave other stimulator cells can kill graft cells or respond to autoantigens, but leave other stimulator cells can kill graft cells or or CDB positive cells can be regulated without one affecting the other. The veto molecule can be administered locally to minimise generalised immunosuppression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tlymphocyte veto molecule comprising response cell activating protein linked to molecule that targets stimulator cell marker, used for selective suppression of immune response, e.g. prevention of graft rejection or treatment of auto-immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          targetting polypeptide; suppression; immune response; treatment; autoimmune disease; allergy; immunological disorder; fusion protein; immunoglobuin G2a; transplant rejection; constant region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A novel T lymphocyte veto molecule is a chimeric molecule comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 40; Page 75-76; 309pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic

Nucleic acid sequences for production of CD4 chimeric protein - used transfect streptomyces, contg. LTI signal sequence linked to pro-pept sequence facilitating peptide cleavage. in - used to pro-peptide

23; 47pp; English

The sequence was deduced by sequencing the plasmid vector VIV2-hCH2- KA CC in S. lividans strain 1326. The protein has domains contg. peptides of CC different function. It contains a CD4 chimera (VIV2) in which the carboxy terminal portion of the protein consists of a murine immunoglobulin light chain constant region, linked to the signal peptide of Streptomyces LTI, CC modified at its N-terminus to include Lys-Arg. Also included is the IgG1 constant region comprising the hinge and CH2 motifs. Human IgG1 is the CC constant region comprising the hinge and CH2 motifs. Human IgG1 is the CC complement and ADCC. The CD4 chimeric proteins may be expressed in CC complement and ADCC. The CD4 chimeric proteins may be expressed in CC complement, and the LTI CD4 protein increases the stability of the CD4, CC thus increasing the serum half life and/or potency against HIV infection CC and inhibit virus-induced cell fusion, relative to soluble CD4. By CC altering only one amino acid at position 2 near the N terminal of CD4 (VI region) from Lys to Ala, a heterologous protein is expressed which is CC efficiently secreted and correctly processed to remove the entire LTI CC signal sequence, but which still retains the gpl20 binding capacity. By modifying the pro-peptide you avoid deleterious effects of additional CC amino acids on the function of the protein. See also AAR20635,6

This sequence is included in the membrane bound proteinaceous chimeric receptor of the invention. Alternatively the transmembrane region of the chimeric receptor contains a portion of the CD7, CD5 or CD34 transmembrane domains. The extracellular portion of the chimeric receptor contains a fragment of CD4 (amino acids 1-394 or 1-200 of the CD4 sequence) which specifically recognises and binds HIV-infected cells, but does not mediate HIV infection. The extracellular domain of the receptor is separated from the cell membrane by 48 or 72 angstroms, or by one or more proteinaceous alpha-helices. The cells expressing the receptor are preferably T cells, B cells, neutrophils, or dendritic cells. The therapeutic cells expressing the chimeric receptor are administered to a
             IgG1 hinge,

The chimeric receptor comprises the extracellular domain (pref. amino acids 1-394 or 1-200) of CD4 linked via the CD7 transmembrane domain to an intracellular portion, e.g. of T-cell recept protein zeta. The IgG1 portion of the chimeric receptor is encoded by t DNA sequence given in AAQ96101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 254

                                                                                                                                                     This invention describes a novel method of preparing a library of protein CC -producing eukaryotic cells comprising (a) introducing specific ce combination signals into one or two chromosomal gene loci. (b) CC Expanding at least one of the modified cells, (c) Transfecting many CC different DNA sequences, each flanked by recombination signals, into the expanded cells and (d) Integrating the DNA sequences into the gene loci on the basis of the recombination signals and the appropriate CC recombinase. The resulting cells express different proteins, each from an integrated DNA sequence and the proteins are bound to the cell surface. The method is particularly used to produce libraries of humanized CC monoclonal antipodies, for selection of those with affinity for particular antigens and useful for diagnostic or therapeutic use. CLibraries of high diversity, provides easy, quick and automatable selection from a large number of proteins, allows relatively simple CC selection from a large number of proteins, allows relatively simple calteration of the expressed gene (e.g. fusion to other protein-coding cs simple verification and characterization of selected cell lines. The method does not require incorporation of a resistance marker. This sequence represents the construct DSS loxP-IgGlDeS loxP-IgGldeIta350/pBS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC This invention describes a novel method of preparing a library of protein CC eproducing eukaryotic cells comprising (a) introducing specific crecombination signals into one or two chromosomal gene loci, (b) CC Expanding at least one of the modified cells, (c) Transfecting many CC different DNA sequences, each flanked by recombination signals, into the CC expanded cells and (d) Integrating the DNA sequences into the gene loci on the basis of the recombination signals and the appropriate CC recombinase. The resulting cells express different proteins, each from an integrated DNA sequence and the proteins are bound to the cell surface. CC The method is particularly used to produce libraries of humanized monoclonal antibodies, for selection of those with affinity for comparison of T cell receptors may also be prepared. The method produces ilbraries of high diversity; provides easy, quick and automatable cellibraries of the proteins also be prepared. The method produces cellibraries of the proteins allows relatively simple celection from a large number of proteins, allows relatively simple celection from a large number of proteins, allows relatively simple celection of the expressed gene (e.g. fusion to other protein-coding simple verification and characterization of selected cell lines. The method does not require incorporation of a resistance marker. This sequence represents the construct MbIGGIM/ pBS MhIgGIMdelta250 described on the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with dimeric protein or its glycosylated form, such as inflammation, septicaemia, cytotoxicity, rheumatoid arthritis, cachexia and other inflammation-

                                                                                                                                                                                                                                                                                                                                                                                                                               EBV-transformed cell lines and mouse-human heterohybridomas producing human MAbs specific for the gp120 V3 loop of HIV-1 MN isolate were obtained. MAb 447-52D was found to recognise the tetrappetide motif GPGR, i.e. the Principal Neutralising Determinant common to the V3 loop of different HIV isolates. A recombinant Ab was produced in which the H chain V region was derived from 447-52D and to which a signal sequence and a H chain intronic sequence are appended, fused to a fragment contg. a short intronic segment of the human gamma 1 encoding domain in its genomic form. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to humanised anti-lymphotoxin beta receptor (LT-beta-R) antibodies. These are derived from the murine LT-beta-R binding antibody CBE11 and can be used to treat neoplasia in humans. The present sequence is a humanised murine CBE11 heavy chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New humanized anti-lymphotoxin-beta receptor antibody, useful for treating or reducing the advancement, severity or effects of neoplasia, particularly solid tumors (i.e. carcinomas) including colorectal cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Garber
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13-OCT-2000; 2000US-0240285P

It can be coexpressed with humanised 1D10 light chain (see also AAW05828) in mammalian host cells. Bispecific antibodies can be constructed that include a first binding fragment comprising humanised M291 heavy and light chain variable regions (see also AAW05826, AAW05830), and a second binding fragment comprising humanised 1D10 heavy and light chain variable regions. Such antibodies are reactive with both T or NK cells and malignant B cells, and have therapeutic and diagnostic applns. (Updated on 16-OCT-2003 to standardis

The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with dimeric protein or its glycosylated form, such as inflammation, septicaemia, cytotxicity, rheumatoid arthritis, cachexia and other inflammation-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New concatameric protein having two soluble domains, useful for diagnosing and treating disorders associated with the dimeric protein its glycosylated form, such as inflammation, septicemia, rheumatoid arthritis and cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antiarthritic; immunomodulator; concatameric protein; sol

The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with dimeric protein or its glycosylated form, such as inflammation, septicaemia, cytocoxicity, rheumatoid arthritis, cachexia and other inflammation-related diseases. This sequence represents the human concerning of the invariant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New concatameric protein having two soluble domains, useful for diagnosing and treating disorders associated with the dimeric protein its glycosylated form, such as inflammation, septicemia, rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates a humanised antibody that specifically binds an epitope contained within positions 13-28 of amyloid beta peptide, Abeta. The antibody is useful to inhibit and reduce the formation of amyloid plaques or the effects of toxic soluble Abeta species in humans their fragments are used for the manufacture of a medicant. This includes the prolonged expression of recombinant sequences of them in human tissues for the treatment of clinical/pre-clinical Alzheimer's disease, Down's syndrome or pre clinical cerebral amyloid angiopathy. Specifically, the antibody is used to sequester Abeta into plasma, brain or cerebrospinal fluid to prevent/reverse accumulation of the Abeta peptide within the brain theraby improving cognition. The present sequence is the heavy chain of a humanised monoclonal antibody, Hu266, based on the mouse antibody 266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-FEB-2000; 2000US-0184601P.

A polypeptide (AAW11639) comprises a leader sequence, RF-1 heavy chain variable region (see also AAW11639), and human gamma 1 constant region. RF1 is a human monoclonal natibody (hMAb) specific for the fusion prott of respiratory syncytial virus (RSV). The polypeptide can be produced is eukaryotic host (e.g. CHO) cells transfected with vector NEOSPLA incorporating a DNA construct (AAT61241) including the RF-1 VH sequence
                                                                                                                                                                                        Human monoclonal antibody specific for respiratory protein - used for the prevention and treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Monoclonal antibody; MAb; RF-1; RF-2; respiratory syncytial fusion protein; F-protein; vaccine; immunotherapy; therapy; Epstein Barr virus; immortalisation; recombinant antibody.

The method involves administering a myelin-associated glycoprotein (MAG) antagonist or anti-MAG antibody, including altered antibodies or their functional fragment. The MAG antagonist or anti-MAG antibody, including altered antibodies or their functional fragment for their functional fragments are useful in preparing a medicament for treating or preventing stroke and other neurological diseases, or for inhibiting neurodegeneration and/or promoting functional recovery in a human patient suffering or at risk of developing stroke or other neurological disease, such as stroke, traumatic brain injury and spinal cord injury, chronic diseases including Alzheimer's disease, fronto-temporal dementias (tauopathies), peripheral neuropathy, Parkinson's disease, Huntington's disease and multiple sclerosis. The present amino acid sequence represents the mouse/human chimeric anti-MAG antibody heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating or preventing stroke and neurological diseases, e.g. Alzheimer's disease, multiple sclerosis or Parkinson's disease, comprises administring a myelin-associated glycoprotein (MAG) antagonist or anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 473 AA;

                                                                     CC prostate adenocarcinoma. The invention encompasses 4B5 derivatives with CC immunologic specificity for antibodies specific for GD2. These CC derivatives, or antigen binding fragments, comprise regions of the 4B5 CC VDJ junction and regions spanning the 4B5 CDRs. Other derivatives include CC Fab, F(ab')2, Fab', scFv and isolated heavy and light chains (see also CAAM88465). Polynucleotide fragments (see AAX06951-54) encoding 4B5 CC antibody V regions are also provided, and therapeutic plasmids and CC polynucleotides. 4B5 has been shown to mimic GD2, and is particularly CC useful in generating a host immune response to cancer. Products of the CC invention can be used in the detection and treatment of e.g. astrocytoma, CC oligodendroglioma, ependymoma, meduloblastoma, primitive neural CC colorermal tumour (PNET), pancreatic ductal adenocarcinoma, small and CC large cell lung adenocarcinomas, squamous cell carcinoma, and liver metastases, CC hepatoma, cholangiocarcinoma, breast tumours such as ductal and lobular CC uterine and ovarian epithelial adenocarcinoma, and lobular cadenocarcinoma, squamous and adenocarcinoma, prostatic adenocarcinoma, couter and couter and couter and chronic leukemia, couter and chronic carcinoma, couter and chronic leukemia, couter and chronic leu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibody 4B5 polynucleotides and polypeptides - used to develop products for the diagnosis and treatment of cancers and for prophylitherapy to reduce risk of recurrence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen binding fragment 4B5; monoclonal antibody; cancer; neoplasm; diagnosis; therapy; melanoma; neuroblastoma; glioma; sarcoma; lung carcinoma; metastasis; anti-idiotype antibody; GD2 antigen; hum

The invention relates to a crystal comprising a CD145 polypeptide in CC complex with an anti-CD45 antibody or its antigen-binding fragment, and CC the structure coordinates of such a crystal. In particular, the crystal CC comprises human CD145 (AAM49202) and a humanised version of the murine CC CD40L, gp39, T-BAM, 5c8 (hu5c8; AAM49203, AAM49204). CD145, also known as CC CD40L, gp39, T-BAM, 5c8 antigen, CD40CR and TRAP) is a 32 kD type II CC membrane glycoprotein which is translently expressed on activated T CC cells. It interacts with CD40 which is expressed on activated T CC cells. It interacts with CD40 which is expressed on activated endothelial CC cells. This CD40:CD145 interaction is required for T cell-dependent CC antibody responses, type I T-helper cell responses, and nittic oxide (NO) CC production by macrophages. NO mediates many of the pro-inflammatory CC activities of macrophages. No mediates many of the CD40:CD145 interaction CC via the use of an anti-CD145 antibody has been shown to reduce the CC symptoms of autoimmune and inflammatory conditions. The crystal structure of the invention can be used to determine the three dimensional structure of the CD145:anti-CD145 antibody complex, and thereby provide information about this interaction which may be of use in designing non-antibody CC CD145 agonists and antagonists which modulate the CD40:CD145 interaction. Such compounds may be used to a therapeutic agent, rejection of a CC allergy, an inhibitor response to a therapeutic agent, rejection of a CC allergy, an inhibitor response to a therapeutic agent, rejection of a CC allergy, an inhibitor response of a treatment of an unwanted to compense of a cell cancer. They may be specifically be used to creat systemic lupus erythematosus, lupus nephritis, benefitis, company restenosis, company restenosis, conschitis, emphysical conschitis, allone of the compense of the company of the provision of a complex conscribed by the company of the provision of a complex conscribed by the compense of the company of th nephropathy, glomerulonephritis, osteoarthritis, rheumatoid arthritis, psoriasis, atopic dermatitis, systemic sclerosis, radiation-induced fibrosis, Crohn's disease, ulcerative colitis, multiple myeloma and cachexia. Sequences AAM49203 and AAM49204 represent, respectively, heavy and light chains of the humanised version of the murine monoc

The antibodies are effective in modulating humoral immune response against T cell dependent antigens, collagen induced arthritis and transplant induced rejection. They are also useful for their anti-inflammatory properties. The antibodies have wide therapeutic applications, including autoimmune and inflammatory diseases and transplantation. The antibody can be used in a pharmaceutical composition for treating a patient suffering from a T cell mediated disorder. They can also be used to treat autoimmune diseases, inflammatory diseases, and transplantation. (Updated on 17-OCT-2003 to

It shows homology to vertebrate immunoglobulin gamma heavy-chain. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with the immune system and cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is an immune system molecule, ISMO-2 from an clone 2849752 isolated from the human breast tumour cDNA library (BRSTTUT13). This sequence is expressed in several libraries, gen those associated with cancer, cell proliferation, immune response
                                                                                                                                                        Binding domain; immunoglobulin; fusion protein; cytostatic;

CC comprising a binding domain polypeptide, that is fused to an Comprising a binding domain polypeptide, an immunoglobulin heavy chain CC comprising a binding domain polypeptide, an immunoglobulin heavy chain CC content region polypeptide that is fused to the hinge region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide, and an immunoglobulin heavy chain CH3 constant region polypeptide, and that is fused to the hinge region polypeptide, a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the first cysteine residues, contains 2 cysteine residues, where the first cysteine residues, and contains 2 cysteine residues, where the first cysteine residues, and contains no more than one (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one (cysteine residues, and a mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one (a) having 3 or more cysteine residues; where complete and a mutated human IgG1 immunoglobulin hinge region polypeptide contains to cysteine residues. The binding domain-immunoglobulin hinge region polypeptide contains to cysteine residues; where cysteine residues; where cysteine residues; where cysteine residues; where cysteine residues; where cysteine residues; where cysteine residues; where complete the cell mediated cytocoxicity (ADCC) and complement fixation. The binding domain-immunoglobulin fusion protein is completed and a carrier; and complement fixation construct, producing the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein, a malignant condition or a B-cell disorder. The binding domain immunoglobulin fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, Grave's disease or autoimmune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             17-JAN-2001; 2001US-0367358P

The present invention describes an antibody, which can react specificall with ganglioside GD2, and is transplanted with a human type complementation-determining domain (CDR), or its fragments. The antibody

react specifically

Page 111-114; 123pp; Japanese

Human type complementation-determining domain transplanted antibody and derivatives against ganglioside GD2, useful in diagnosis and therapy of e.g. tumors, has low antigenicity, little side effects but potent activity in cancer.

```
The invention relates to a binding domain-immunoglobulin fusion protein comprising a binding domain polypeptide, an immunoglobulin hange region polypeptide, an immunoglobulin heavy chain CC polypeptide, and an immunoglobulin heavy chain CT constant region polypeptide that is fused to the hinge region CC polypeptide, and an immunoglobulin heavy chain CT constant region polypeptide comprises: a wild-type human IgG1 Immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues, where the first cysteine is not mutated; a contains 2 cysteine residues, where the first cysteine is not mutated; a cutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; (a) having 3 or more cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (b) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (c) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (c) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (c) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (c) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains on cysteine residues. The binding domain-immunoglobulin hinge region polypeptide or an isolated polymucleotide encoding the construct comprising the polymucleotide (perably linked to a promoter), c a host cell transformed or transfected with a recombinant expression construct producing the binding domain-immunoglobulin fusion protein, a promoter, and treating a subject to having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein or a binding domain and constinued domain condition or a binding domain con
sclerosis or autoimmune disease. The present sequence is a binding doma -immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence and electronic format directly from the sequence in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New binding domain-immunoglobulin fusion protein, useful for treating a subject having or suspected of having a malignant condition or a B-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
The invention relates to an anti-Abeta (amyloid-beta peptide) antibody 266. The antibodies are useful for treating and preventing conditions associated with the Abeta peptide, such as Alzheimer's disease, Down syndrome, and cerebral amyloid angiopathy; for disgnosing diseases in humans; for determining whether a human subject will respond to treatment using humanized antibodies against Abeta; for treating, preventing and reversing cognitive decline in clinical or pre-clinical Alzheimer's disease, Down's syndrome or cerebral amyloid angiopathy; for inhibiting formation of amyloid plaques of the effects of toxic soluble Abeta species in humans. Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease
                                                                                                                                                                                                                                                New antibodies comprising a heavy chain and a light chain complementarity determining regions from antibody 266, for treating and preventing conditions associated with the A beta peptide, e.g. Alzheimer's disease
                                                                                                                                                                                                    Disclosure; Fig 6; 82pp; English.

The antibodies are useful for treating and preventing conditions associated with the Abeta peptide, such as Alzheimer's disease, Down syndrome, and cerebral amyloid angiopathy; for disgnosing diseases in humans; for determining whether a human subject will respond to treatment using humanized antibodies against Abeta; for treating, preventing and reversing cognitive decline in clinical or pre-clinical Alzheimer's disease, Down's syndrome or cerebral amyloid angiopathy; for inhibiting formation of amyloid plaques of the effects of toxic soluble Abeta species in humans. Treatment of the patients with antibody will inhibit or prevent cognitive decline typically associated with disease progression and reverses it. The present sequence represents a humanised anti-Abeta antibody 266 N56S heavy chain

Sequences of the present invention are useful for the diagnosis, prognosis and treatment of cancer. They are also used in gene therapy. The present sequence is KS antibody heavy chain-interleukin 2 (IL-2) fusion protein. This sequence is used to illustrate the method of the
